Abstract.

1 Introduction

2 Figures

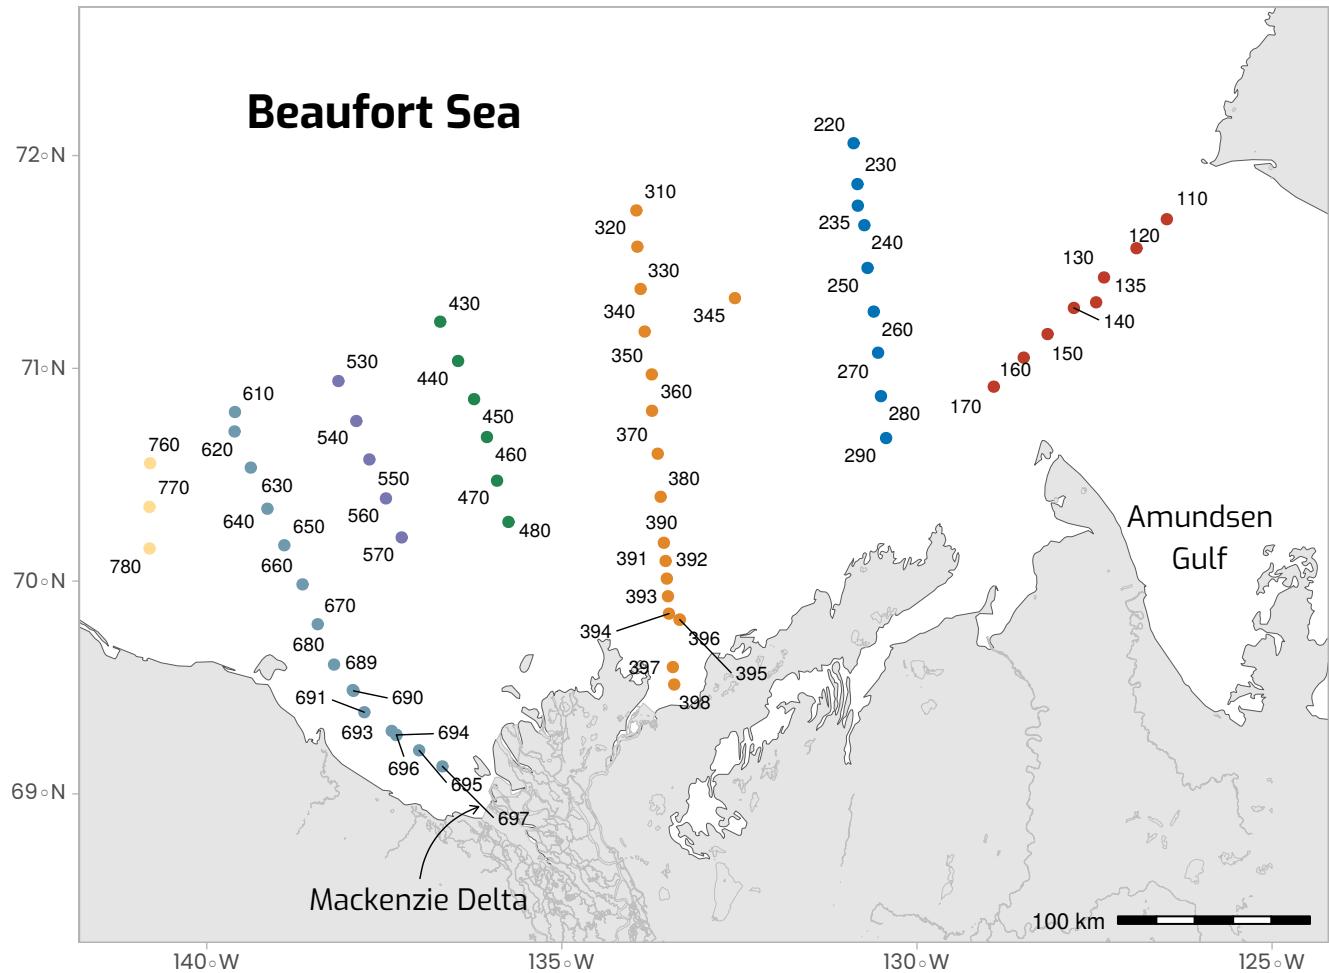

Figure 1. Localisations of the sampling sites visited during the Malina 2009 campaign. The colors of the dots represent the seven transects visited during the mission whereas the light gray line shows the ship-track of the Canadian research icebreaking CCGS Amundsen.

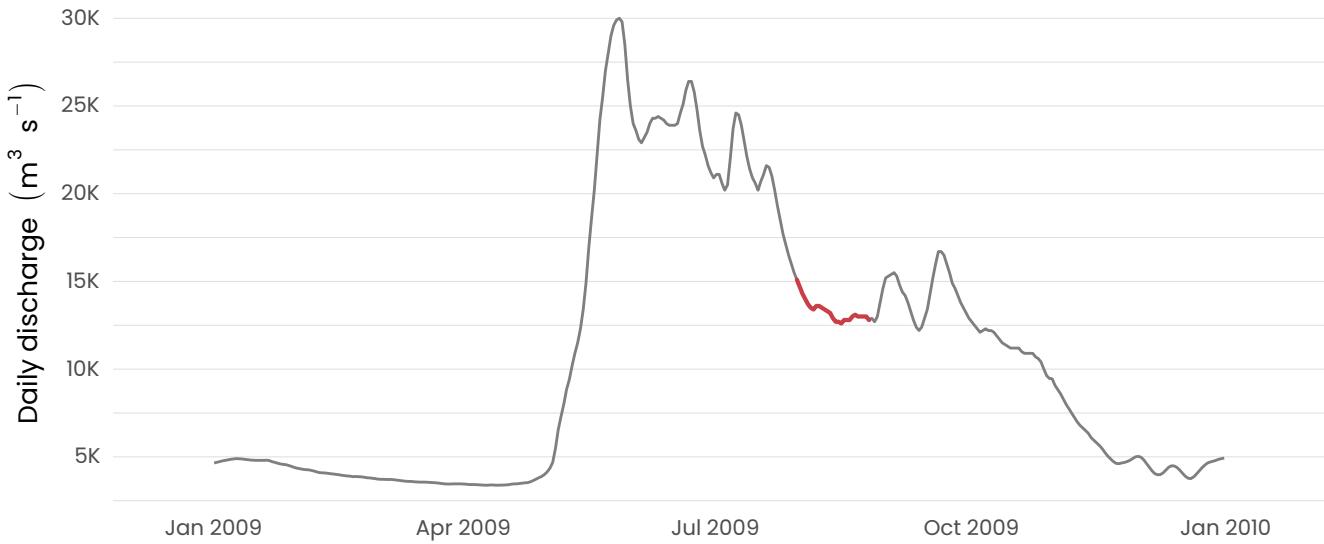

Figure 2. Daily discharge of the Mackenzie river at the Arctic Red River junction (station 10LC014). The colored segment identifies the period of the Malina campaign.

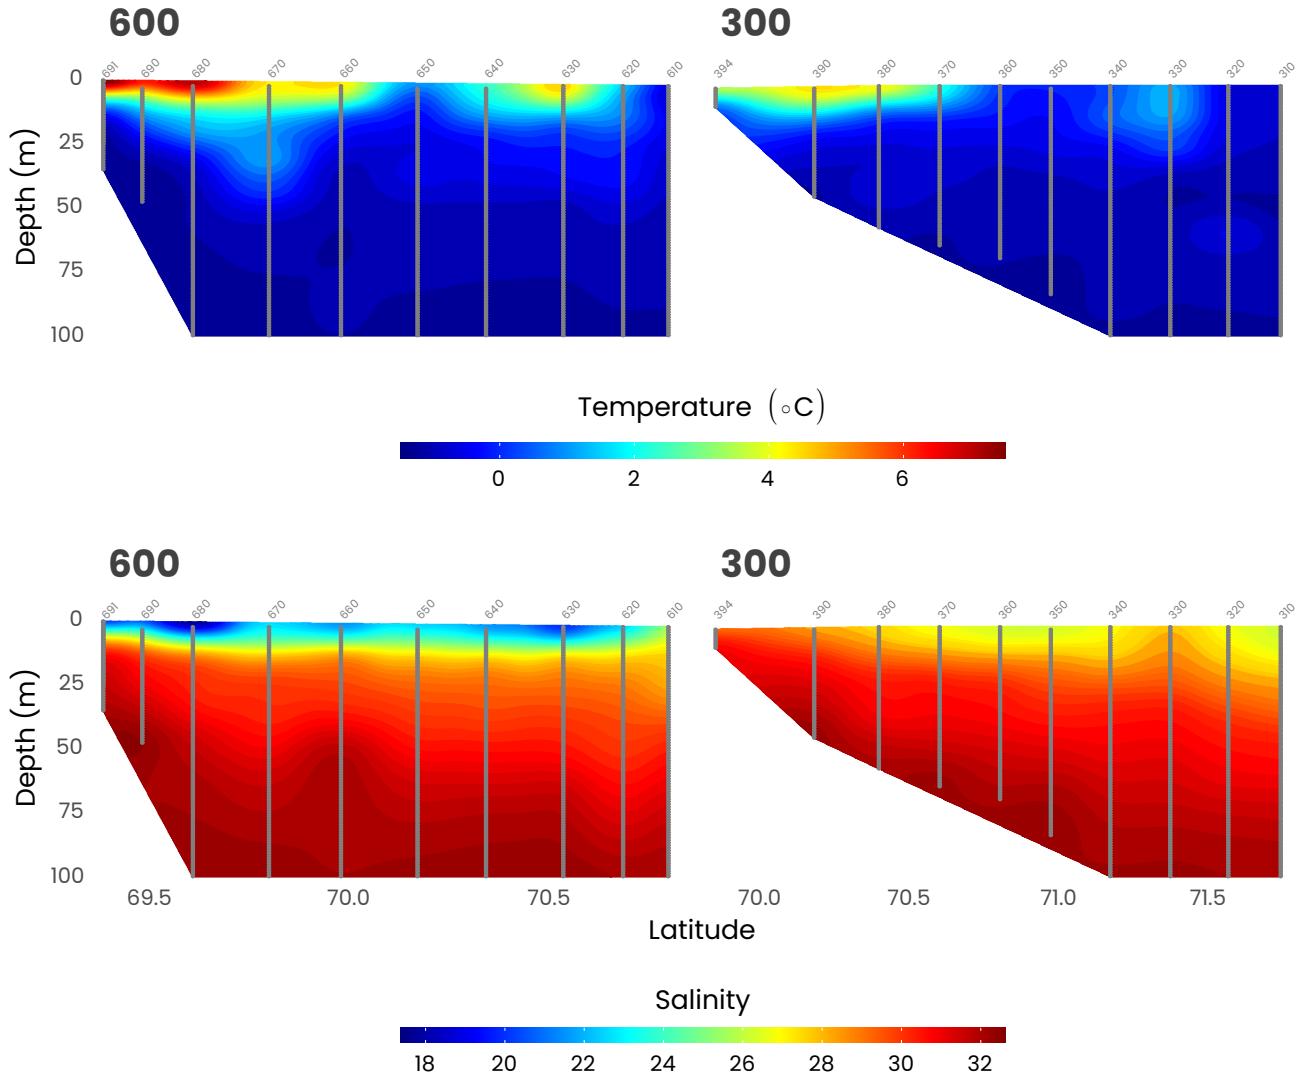

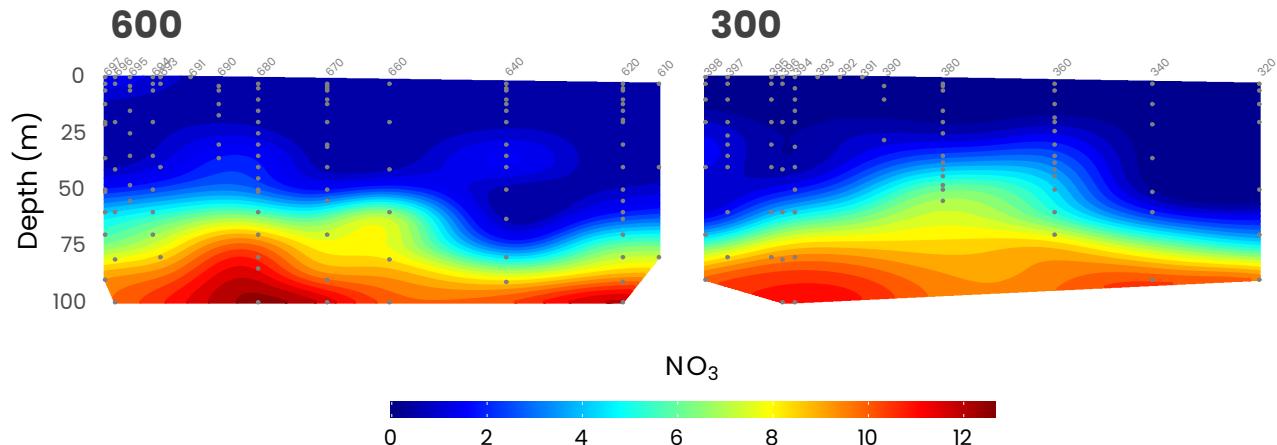

Figure 3. Latitudinal cross-sections of temperature and salinity measured by the CTD (gray dots) in transects 600 and 300 (bold numbers on top of each panel). Station numbers are identified in light gray on top of each panel.

A

B

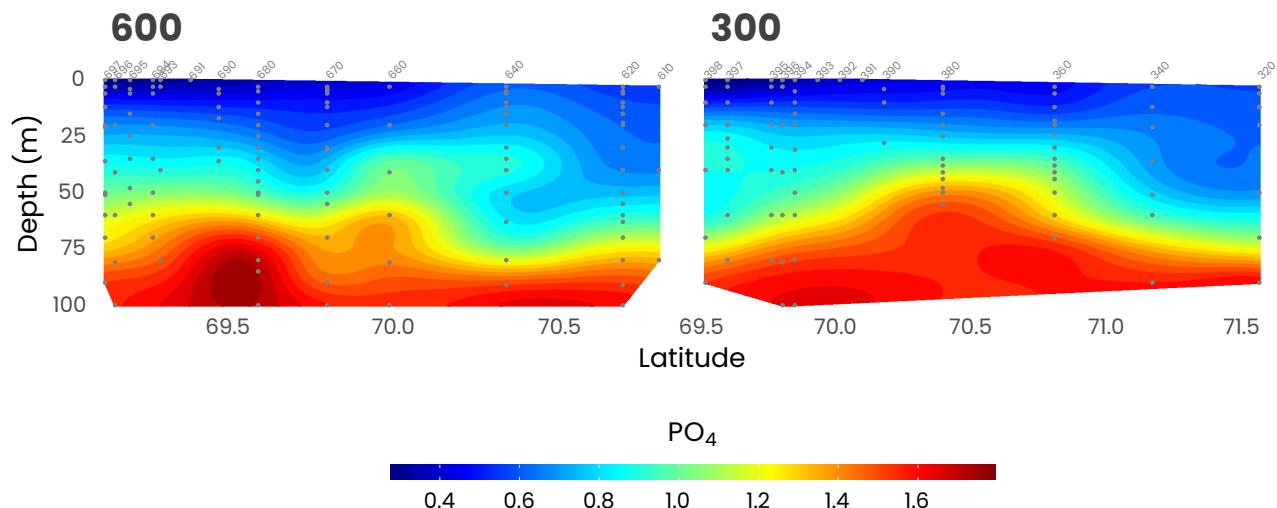

Figure 4. Latitudinal cross-sections of NO₃⁻ and PO₄³⁻ measured from niskin bottles (gray dots) in transects 600 and 300 (bold numbers on top of each panel). Station numbers are identified in light gray on top of each panel.

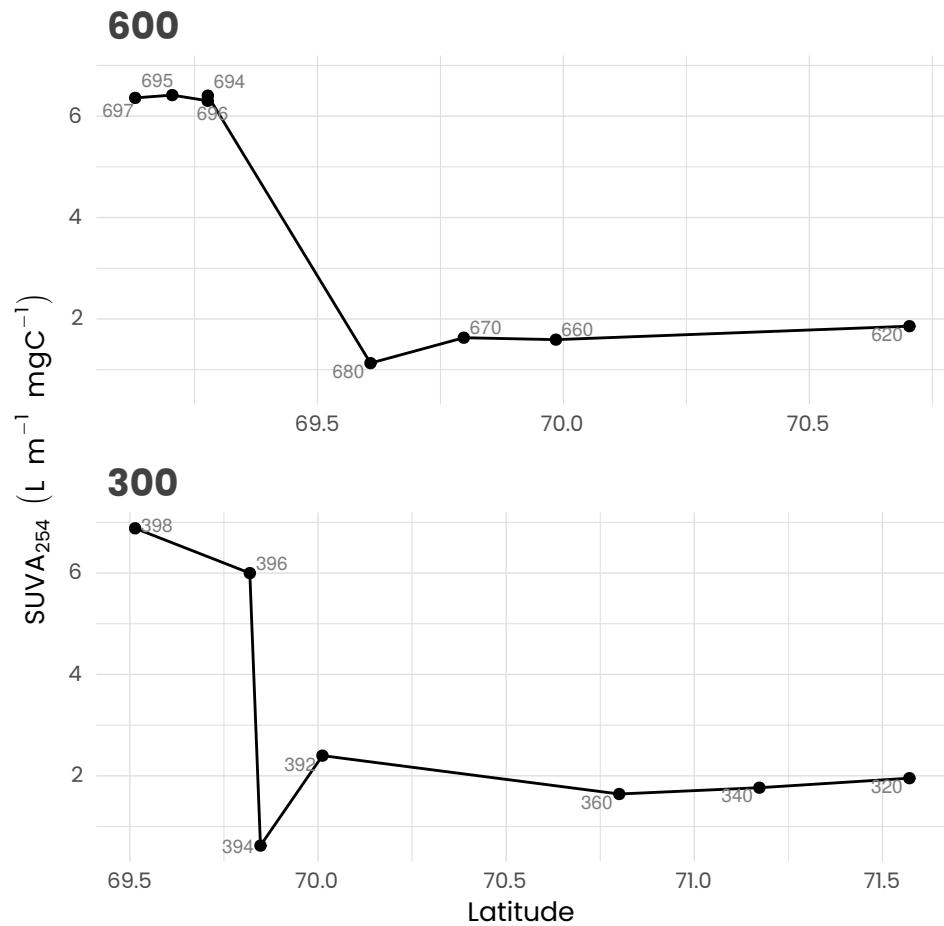

Figure 5. Specific UV absorbance at 254 nm (SUVA₂₅₄, i.e. absorption of light at 254 nm per unit of carbon) at surface for stations (identified in light gray next to each point) along transects 600 and 300 (bold numbers on top of each panel).

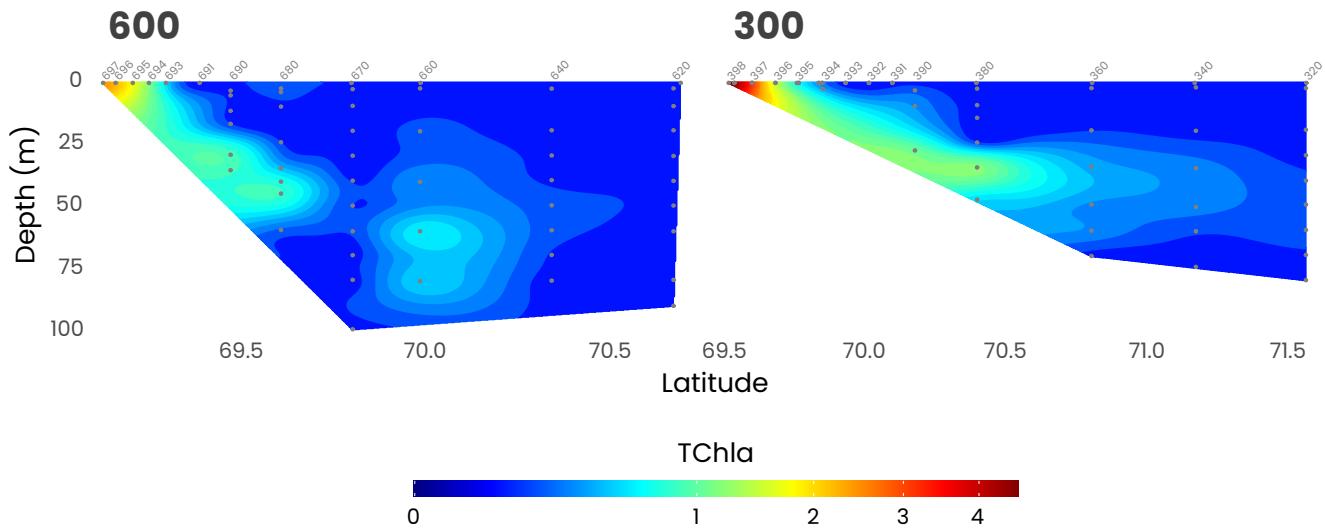

Figure 6. Latitudinal cross-sections of total chlorophyll-a measured from HPLC (gray dots) in transects 600 and 300 (bold numbers on top of each panel). Station numbers are identified in light gray on top of each panel.

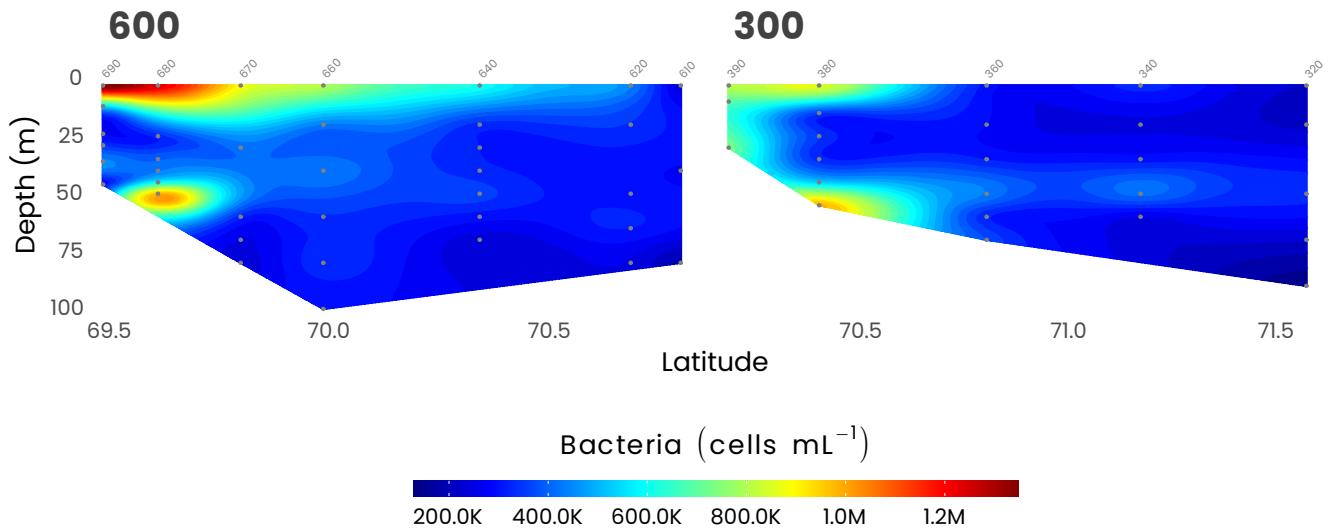

Figure 7. Latitudinal cross-sections of bacterial abundance measured from flow cytometry (gray dots) in transects 600 and 300 (bold numbers on top of each panel). Station numbers are identified in light gray on top of each panel.

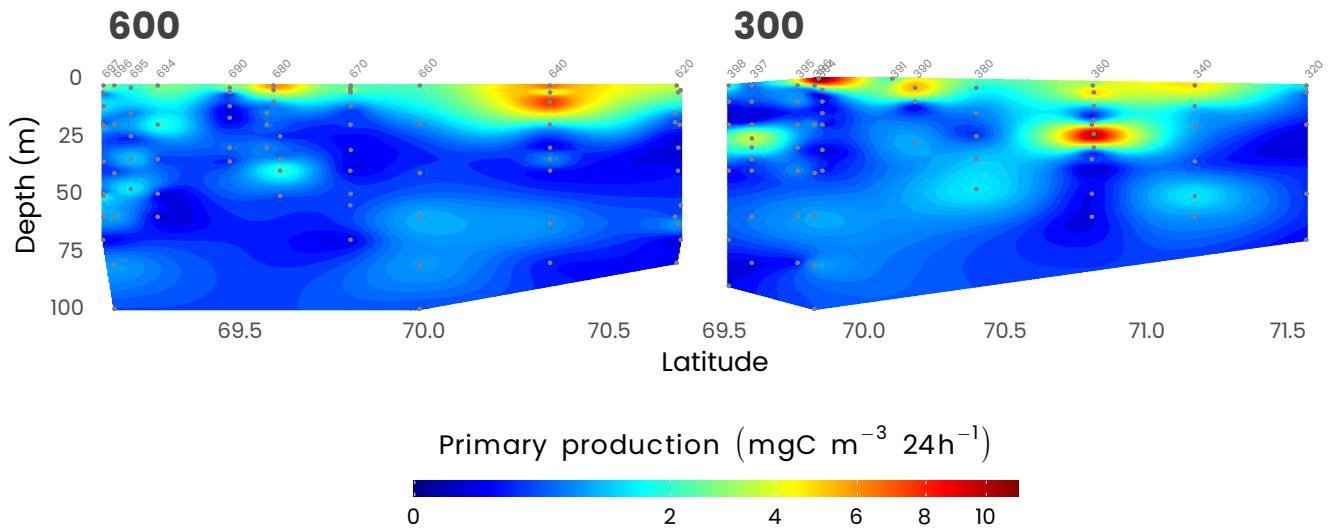

Figure 8. Latitudinal cross-sections of primary production measured from xxx (gray dots) in transects 600 and 300 (bold numbers on top of each panel). Station numbers are identified in light gray on top of each panel.

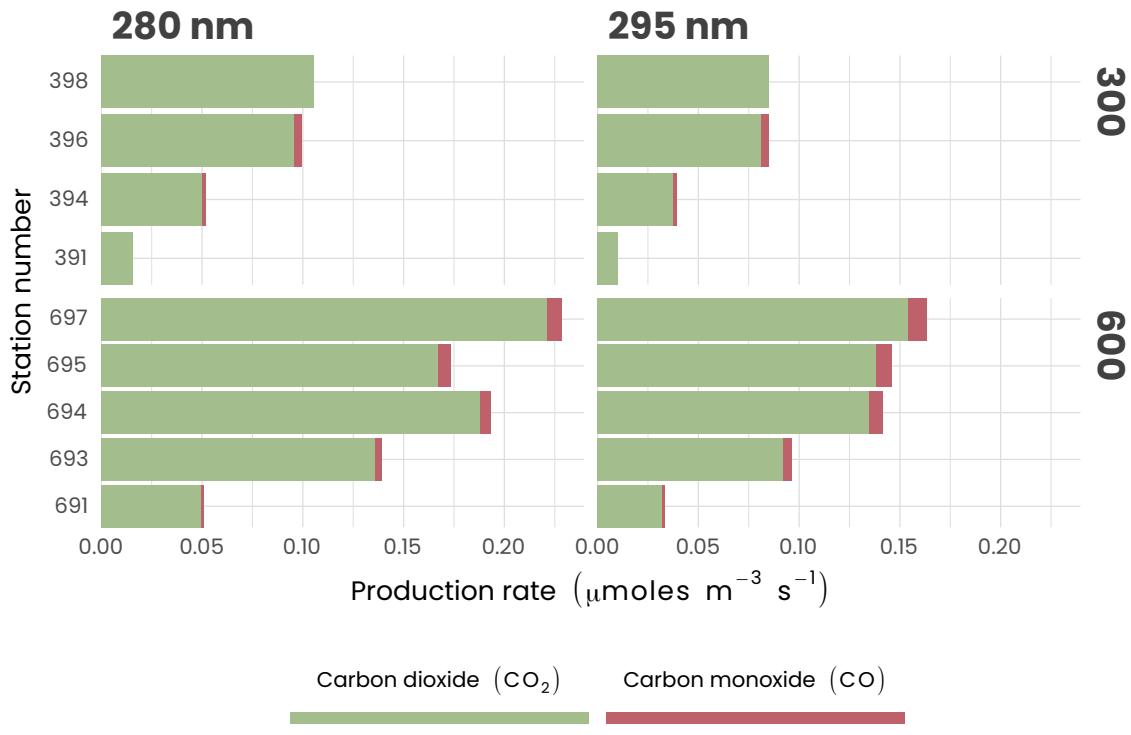

Figure 9. CO and CO_2 production measured at 280 and 295 nm at surface for stations of transects 600 and 300 (bold numbers on the right of the graph).

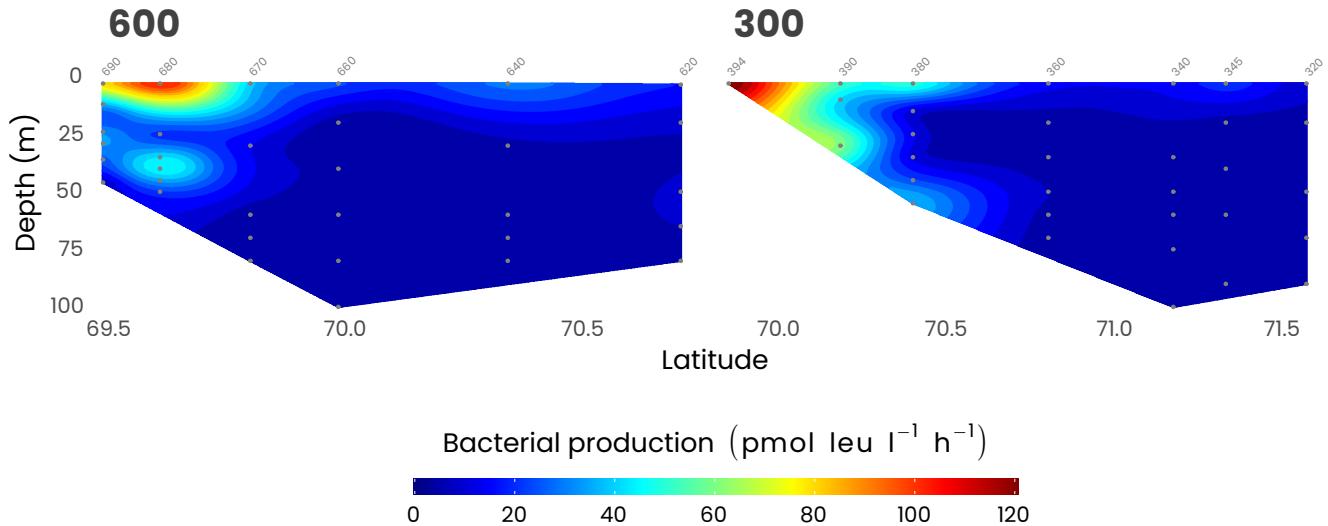

Figure 10. Latitudinal cross-sections of bacterial production measured from XXX (gray dots) in transects 600 and 300 (bold numbers on top of each panel). Station numbers are identified in light gray on top of each panel.
